Dear Mr. Geary:

We received your letter and are delighted to respond. You indeed picked up reception for KLRE/KUAR on November 11, 1988, on 89.1 FM and 90.5 FM. KLRE and KUAR simulcast from 7:00 p.m. at night until 5:00 a.m. Monday through Friday, and from midnight until 8:00 a.m. on Saturdays and Sundays. Therefore, you heard identical programming on both frequencies 9:57 to 10:45 p.m. on Friday night, November 11, 1988.

Except for the above stated times, programming is separate on the two frequencies. KLRE FM 90.5 FM broadcasts with 40,000 watts of power and the height above average terrain of KLRE's antenna is 307 feet. The KLRE FM transmitter and antenna are located in southwest Little Rock at 7701 Scott Hamilton Drive.

KUAR's transmitter and antenna are located on Shinall Mountain, west of Little Rock. The height above average terrain is 890 feet. KUAR's antenna is currently located at the 350 foot level of Channel 16's TV tower, but will be moving to another tower on Shinall Mountain at approximately the same height sometime in the spring of 1989. KUAR FM operates with 100,000 watts of power.

I have enclosed a program guide for the stations. KUAR's program schedule is located in the middle of the guide and KLRE's is located on the inside back cover. KLRE/KUAR studios are located on the campus of the University of Arkansas at Little Rock. KLRE and KUAR are the only two public radio stations in the country "co-licensed" to two, separate institutions. The Little Rock School District and the University of Arkansas are the co-licensees of both KLRE and KUAR.

Thank you for your interest in KLRE/KUAR and if I can offer you any further information, please don't hesitate to contact me.

Sincerely,

Regina Dean
